Some streaming services have existed for years without the ability to download shows and movies to watch offline, but this functionality was available on the 1st day at Disney. There are more than 600 titles to dive into, enough to binge hundreds of hours of The Simpsons without watching even a fifth of what's available. Perfect for plane rides and humble data spenders, the service download feature - which is exclusive to mobile apps at the time of writing this article - is so simple, even Olaf can use it, and with every title right, it's just a matter of figuring out what you want. Here we will go through the process of downloading and deleting movies and shows from the Disney app. If you're hurting for storage space on your iPhone or Android smartphone, Disney includes a variable quality feature that allows you to donate visual fidelity to a smaller digital footprint. Open the Disney app on your smartphone (iOS, Android) and tap the profile icon in the bottom right corner. From there, go to the settings apps for download quality. You'll see options standard, medium and high, the latter probably offers no higher than 1080p resolution. Step 2: Download content because you can view every Disney title offline, no guesses or filters are required to find downloadable content. The hardest part of this particular task is figuring out what you want to watch. Once you've figured that out, all you have to do from a movie or show listing is click the download button, which is far to the right of the Play button under the logo of the name. For the show, you can also find a separate download button next to each episode if you don't want the whole season. Disney cares about magic from there. It's a relatively quick download on Wi-Fi, especially on lower quality, so you can probably snag dozens of movies in those couple of hours before the flight if you forgot to do it the night before. Step 3: Watch downloaded movies and shows all that's left to do now is enjoy! An easy way to find a download is by clicking the download icon, which is always visible in the bottom right corner of the Disney app. All your content will be listed here, sorted when you downloaded. Click the play button on the sketch all you want to watch and you go. The episodes are listed a little differently - they are embedded under the same label, and clicking on it will present all the episodes you downloaded for this show, grouped by season. You can also find these titles through regular search and browsing. You'll know that something is available for offline viewing if you see a smartphone icon where the download button usually sits. How much space do I need? The amount of space to store each title eats up mainly on the length of the video and resolution, and with other variables playing in - The biggest of your quality parameters - this number can vary greatly. We downloaded three films of similar length and resolution - some from Star Wars movies that clock in just over two hours each - to see how each of the options affect the file size. The Empire Strikes Back at standard quality was 0.92GB over a 2-hour, 7-minute run time, while the new hope for average needed 1.4GB in 2 hours and 4 minutes. This is a modest leap compared to the high-quality Jedi Return, which took 5.5GB in 2 hours and 14 minutes. For the show, the 39-minute episode of Mandalorian on high quality takes 1.5 GB, but only 270MB to standard and 424MB to medium. Finally, in a 3-hour, 1-minute run time, Avengers: The End of the Game needs a whopping 7.1GB. Using the data above, you can develop an approximate estimate of how much space you need to store everything you want. You can mix and match by adjusting quality settings before triggering the download. Now will also be a great time to establish whether a Wi-Fi connection is required to download content, an option those on limited data should certainly consider. Disney only allows you to download Wi-Fi by default. What's available? As explained above, everything in the Disney catalog can be downloaded for offline consumption. Whether it's the whole season of Darkwing Duck or every movie from the Marvel Cinematic Universe, if it's at Disney, you can download it. Unlike some other services, Disney is pretty free for restrictions. First, you can download one name on up to 10 different devices at a time, and you can download any of them as often as you want. The only thing Disney asks is that you connect to Disney every 30 days. How do I remove names? After all, you want to make room for

something new. If you want to remove one name or heap all at once, Disney makes the task delightfully simple. Step 1: Removing one title When you want to destroy titles from your device, the process is much easier than downloading files. In fact, it only takes you a couple of seconds to remove something from Disney. First, find the content, the headline in the download section. You can access the download area by clicking on the second icon on the right on the app's navigation bar. Find the movie you want to remove and tap the smartphone icon to the right of its name. Choose Delete Download, and the title will accompany itself immediately to storing your smartphone. If you're deleting a few favorite movies or shows, this is an easy way to do it. Step 2: Removing all Disney titles makes it easy to remove multiple titles from your platform at once. In fact, there are actually two different ways you can do this. Once you're in the Downloads section, you can press the button Located in the upper right-right top to the right of the screen. Several squares should appear next to your names and you can touch the square to choose the appropriate name. After you've tagged all the titles you'd like You can click the garbage icon. In addition, you can also click the Select All button to select all the titles to remove. Hitting it a second time will deselect all your titles. If you're looking for an even faster solution for mass removal, Disney offers it. You can tap the profile icon in the bottom right corner and get into the app settings to remove all downloads. This option allows you to trash everything with one button - leaving more room for any new titles you want to download further. Editors' recommendations (Image credit: Tom's Guide) Sitting in front of the TV and watching your favorite movie is always a nice treat, it's not always as easy as it sounds. Just turning on the TV and stumbling over your favorite movie right as it is starting from the beginning requires luck and that's before you have to contend with random commercials. That's why downloading your favorite movie directly to your device with Movie Downloader is the best option for your home entertainment needs. All you have to do is make sure to download Movie Downloader on your preferred device, whether it's Windows or a mobile platform. The best performance apps here are the best Netflix shows to watch here all you want to know about the Amazon and Apple have received a lot of For recent forays into downloadable movies, startup Guba.com, in fact, quietly do more and do better than its much-hyped bloated Here's a quick conversation from this month's issue with Guba CEO Thomas McInerney, who tells his story. It's hard not to root for a guy. The latest news is that Lipa is launching an on-demand horror channel with Comcast, Sony and Lions Gate (obviously for Halloween). It's an on-demand video channel for Comcast customers, a web offer, and a mobile game (FearNet Mobile). So check out our piece and then download Clockwork Orange or Dial M for the kill. And let us know what you like and don't like about the digital movie video experience. Experience.
